Build the APK File for the Project

Team ID	PNT2022TMID05098
Project Name	CONTAINMENT ZONE ALERTING

Step 1: Build a debug APK file is a few steps.

**Build > Build Bundle(s)/APK(s) > Build APK(s)**

Select the above option from toolbar menu.
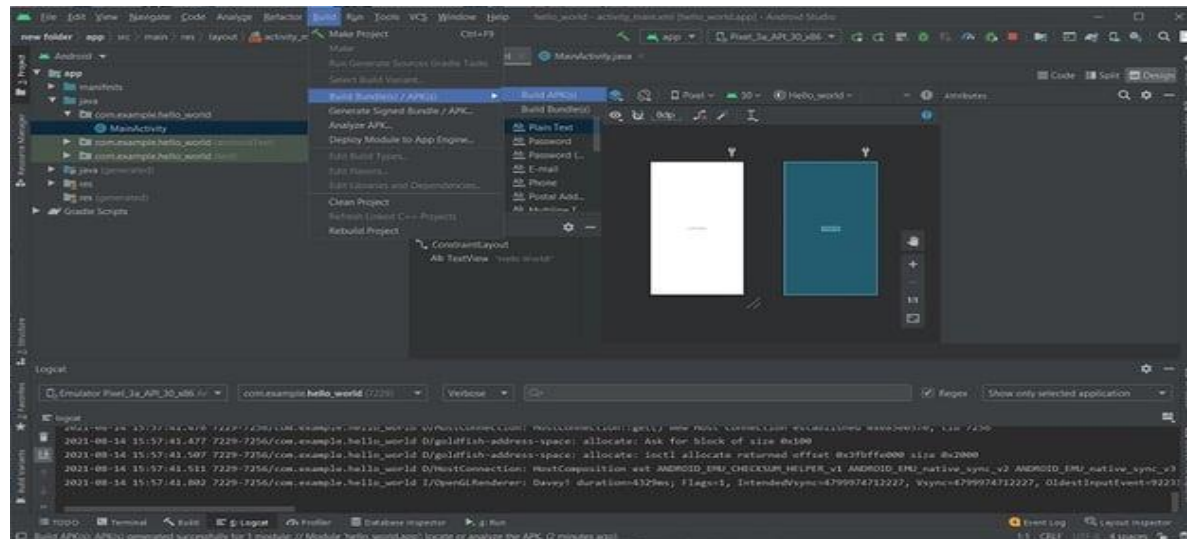

**Step 2:** It will take a moments to generate an APK file.
Once it build is complete, go to **app/build/outputs/apk/debug.**

Step 3: Generate a signed APK file, open the **Build** menu and select
Generate Signed Bundle/APK. This opens up a screen to select the
Android App Bundle and check the APK radio button and proceed to
the next windown.
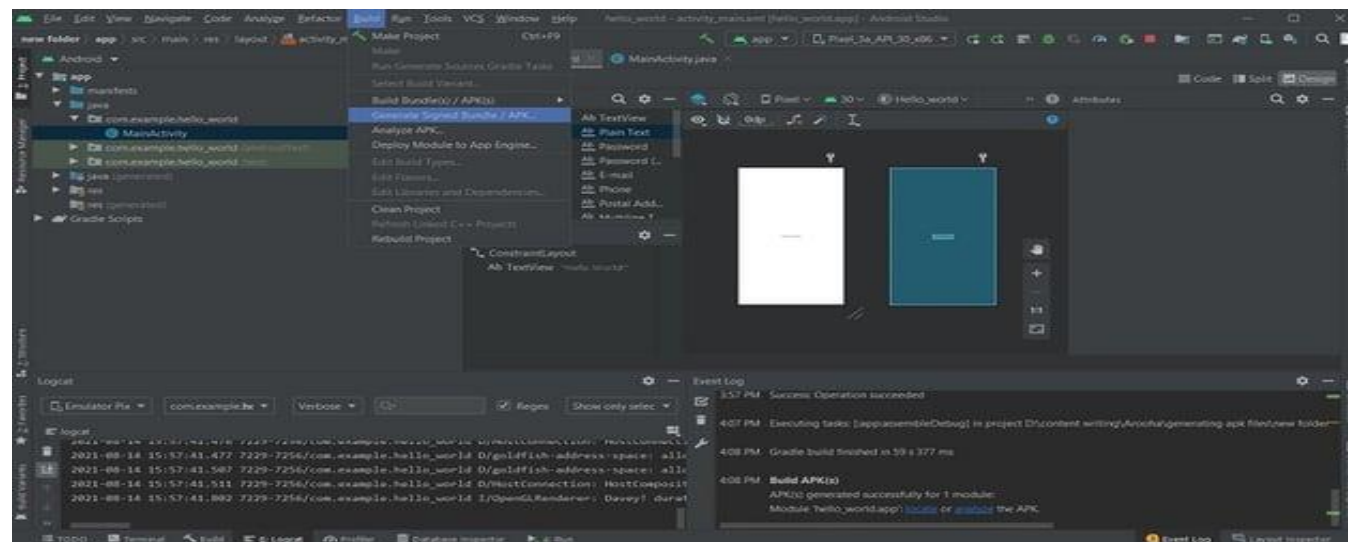

Step 4: Now set the key store path,key store password,key alias and the Key password and click next.
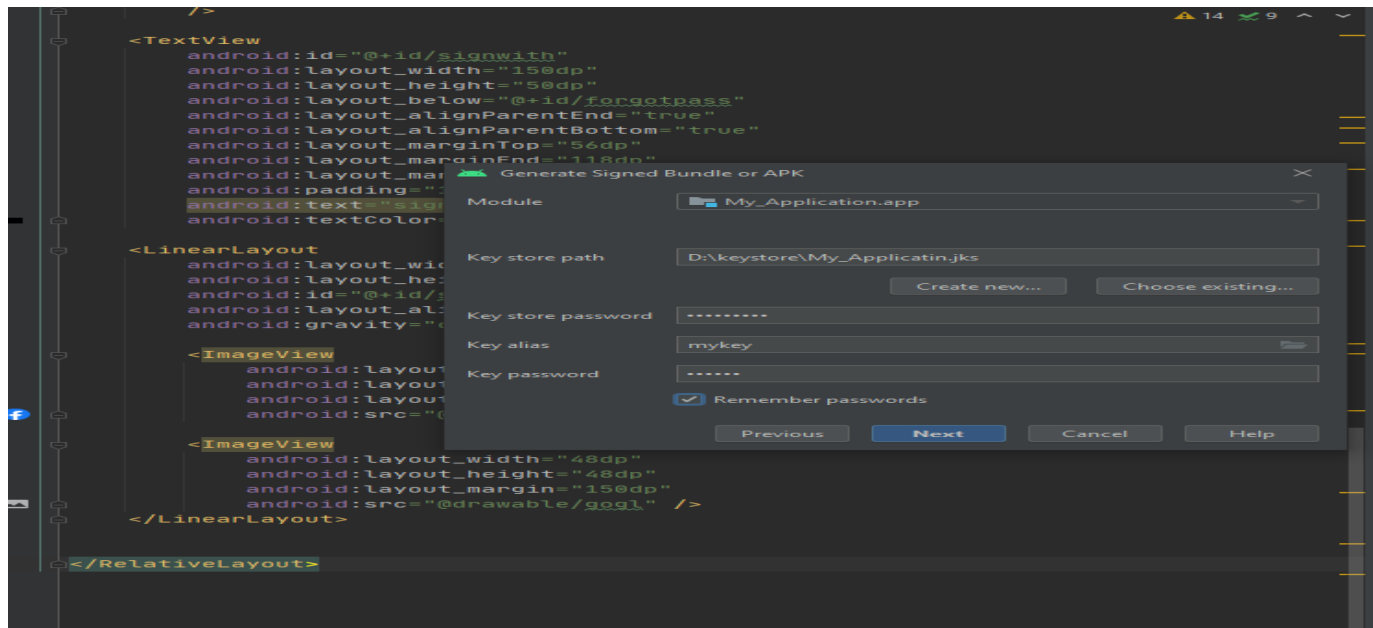

Step 5: Now select the option **Release** and select the **V2(Full APK Signature)** and click finish. At last the signed APK file to be created.
